

## New Book Release

*Ozark Forest Forensics:  
The Science Behind the Scenery  
in Our Regional Forests*

by Frederick Paillet and Steven Stephenson

\$24.95

*Ozark Forest Forensics* interprets our natural surroundings in a way that enhances a simple walk in the scenic deciduous woodlands of the Ozark Mountain region. Explanations go beyond trees and their habitat to include other diverse subjects: the leaf litter beneath a hiker's feet, strategies used by wildflowers for pollination and seed dispersal, diseases that can ravage our forests, and forces active in the landscape that impact conservation efforts. Simplified line drawings demonstrate specific points of interest in a way that visually cluttered photographs cannot do.

Includes: 163 line drawings, a list of species used in the text, a glossary, and a reading list.

Paperback; 342 pages

ISBN: 978-0-912456-28-7

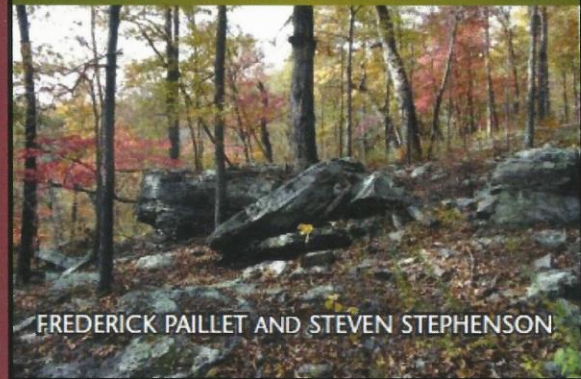

FRED PAILLET is adjunct professor at the University of Arkansas, where he conducts research and supervises student projects related to geophysics, hydrology and paleoecology. He earned his PhD from the University of Rochester in New York.

STEVE STEPHENSON is a research professor at the University of Arkansas, where he teaches courses in plant biology, forest ecology and plant ecology. Stephenson earned his PhD from Virginia Polytechnic Institute and State University.
